PROFESSIONAL SUMMARY

Brazilian full-stack developer and data analyst, with a technical diploma in Software Development from SENAI and currently pursuing a degree in Information Technology Management at IFSC. I work with **TypeScript, React, Node.js and PostgreSQL**, covering the full cycle: data modeling, application, automated testing and deployment. I am currently with the Quality department at Instituto Santé (Bewiki Care), where I automated the weekly consolidation of patient safety indicators, a routine that now runs with no manual intervention. I document architecture and processes so that operations never depend on a single person. I am looking for a development or data role where I can contribute to production systems and keep growing technically alongside the team.

PROFESSIONAL EXPERIENCE

Instituto Santé · Bewiki Care

Aug 2026 – Present

Data Analyst, Internship · Quality & Patient Safety Department

Florianópolis, Brazil

- Audit quality and patient safety records, flag inconsistencies and consolidate the KPIs tracked by management.
- Automated the weekly routine that consolidates and delivers these indicators, now running unattended, with batch processing, failure handling, API quota control and automated tests.
- Integrated large language models into the triage of inconsistent records, with mandatory human validation before any decision.
- Documented the architecture and wrote the operations manual, handing the routine over to the department team.

Federal Institute of Santa Catarina (IFSC)

Sep 2025 – Dec 2025

Funded Research Fellow · Organizing Committee, National Science & Technology Week 2025

- Supported the coordination of Brazil's National Science & Technology Week, covering activity planning, schedule management and registration control.
- Built the event's interactive web map, used by attendees to locate activities across the campus.
- Liaised with internal teams, allocated resources and tracked deliverables.

EDUCATION

Bachelor of Applied Science in Information Technology Management

Federal Institute of Santa Catarina (IFSC) · Florianópolis, Brazil · 2,200h applied undergraduate degree · 4th of 6 terms · expected graduation Dec 2027

2025 – Present

Development (320h): Programming Logic · Object-Oriented Programming · Web Programming I & II · Software Development Processes
Data (120h): Databases · Business Statistics · Human-Computer Interaction
IT Management (240h): Project Management · IT Strategy & Planning · Process Modeling · Knowledge Management · Decision Making
Infrastructure (240h): Network Infrastructure & Management · Network Operating Systems · Infrastructure Virtualization
Upcoming: Data Science (80h) · ICT Governance · Information Security · Knowledge Modeling · Capstone Thesis

Technical Diploma in Software Development (concurrent with High School Diploma)

2022 – 2024

SENAI/SC · Florianópolis, Brazil · 1,112h of technical training

Development (440h): Programming Logic · Systems Development · Application Programming
Software Engineering (180h): Systems Modeling · Software Testing · Deployment & Maintenance
Data & Fundamentals (260h): Databases · Computational Logic · IT Fundamentals
Infrastructure (160h): Computer Networking Fundamentals · Internet of Things · Applied Electronics

PROJECTS

Lexiona

Full-Stack 2026 In production Solo project

Lesson planning platform for teachers. The calendar is the product: classes are generated from each course's timetable by a SQL function that walks the academic term and skips holidays, including movable ones computed with Meeus' algorithm. Every class carries a versioned lesson plan, attendance and history. **Five AI agents** (syllabus parsing from PDF, DOCX, image or audio; generation of up to 60 lesson plans per request; alternative ideas; chat with memory; replanning) receive the course's actual history as context rather than a generic prompt.

No application server: the browser talks directly to Postgres through PostgREST, and isolation between teachers is enforced by Row Level Security rather than by the UI; the service key exists only inside Edge Functions. AI jobs are resumable — they persist progress and pause when the execution budget runs out, with updates pushed over Realtime instead of polling. Per-operation quotas, installable PWA and accessibility built into the structure: theming, high contrast, density, text scaling from 80% to 160% and full keyboard navigation. **20 versioned migrations, 169 frontend tests and 64 schema and RLS assertions** running in CI, plus query plan benchmarking of the 13 critical RPCs.

Lorekeeper

Full-Stack 2026 In production Solo project

 lorekeeperfg.vercel.app  github.com/gasperinifr/lorekeeper

End-to-end platform for running tabletop RPG campaigns: characters, NPCs, locations, items, events and narrative all in one system. Features AI content generation with **automatic model failover** when a provider fails or hits its quota, an interactive relationship graph between entities, real-time chat, an event timeline and D&D 5e content import via 5etools. Custom Fastify API with JWT authentication, S3 media uploads and containerized deployment.

React TypeScript Node.js Fastify PostgreSQL Supabase JWT AWS S3 Docker Fly.io

CSVision

Full-Stack 2026 In production Solo project

 csvisionboard.vercel.app  github.com/gasperinifr/csvision

AI-powered platform for analyzing and visualizing CSV files. Users drag and drop a spreadsheet, an LLM (Groq) semantically identifies the role of each column, and the app builds interactive dashboards with customizable charts. **RFC 4180 parser written from scratch in TypeScript**, with all processing done in the browser: only metadata reaches the server, so the user's spreadsheet never leaves their machine.

Next.js 14 TypeScript Supabase Groq API Recharts Vercel

DPPE Dashboards · IFSC Florianópolis

Full-Stack 2026 Commissioned by department

 github.com/gasperinifr/dppe2025

System that automatically generates dashboards from the CSV spreadsheets of the DPPE department at IFSC's Florianópolis campus, built at the department's request. It replaces the manual chart-building done for every new file, with PL/pgSQL functions in Postgres and a React presentation layer.

React TypeScript Vite TailwindCSS Supabase PostgreSQL PL/pgSQL

EcoPraia

Web 2024 Team project

 github.com/leiticiaff/EcoPraia

Web application built by a team to raise awareness about waste collection on the beaches of Florianópolis, Brazil. Problem-based learning project for the Technical Diploma in Software Development.

HTML CSS JavaScript

SKILLS & COMPETENCIES

- Languages:** TypeScript · JavaScript · Python · SQL
- Frontend:** React · Next.js · Vite · TailwindCSS
- Backend:** Node.js · Fastify · Deno · FastAPI (Python)
- Databases:** PostgreSQL · Supabase · MySQL · data modeling
- Postgres:** RLS · RPCs · versioned migrations
- Applied AI:** LLMs (Groq, Gemini) · Whisper · vision
- AI in production:** quotas, failover and resumable jobs
- DevOps:** Git · CI/CD · Docker · Vercel · Fly.io · AWS S3
- Data analysis:** Advanced Excel · KPIs · dashboards
- Automation:** Google Apps Script · Workspace APIs
- Healthcare:** Tasy HIS · quality & patient safety KPIs
- Testing:** Vitest · Testing Library · schema testing
- Accessibility:** WCAG · PWA · UI/UX · Figma
- Documentation:** technical and end-user
- Management:** projects, stakeholder requests and cross-team communication
- Language:** English C1 · fluent technical reading & communication
